

# RBDMS WellFinder

RBDMS WellFinder is a free mobile application (iOS & Android) that is available for use by anyone who chooses to download the application. The RBDMS WellFinder application allows users to explore wells in multiple participating states across the nation. Users can see well locations on a map and interact with a data-centric view of well information, which includes normalized values representing well name, status, type and location information.

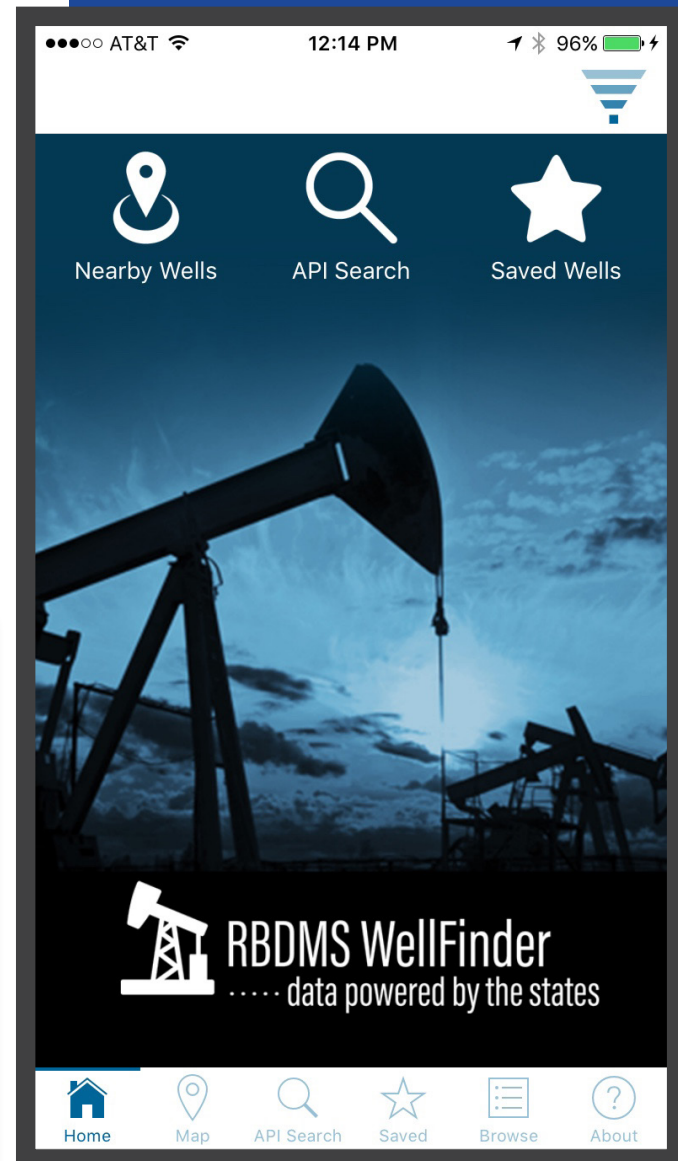

## KEY FEATURES

- View wells on a map
- Use the mobile device's GPS to see wells near the user
- Navigate to wells by state, county and township
- Save wells to view again later

## TECHNICAL SPECIFICATIONS

RBDMS WellFinder was built with the following primary technologies:

- Cordova
- Ionic
- AngularJS

### Client

*Hardware Recommendations*

- Android or iOS Mobile Device

*Software Recommendations*

- Android 4.1+
